

Aerospace Standard Electrical Distribution Box

Overview

The PDU is a dual channel, redundant, EASA CS-LURS Compliant aircraft electrical system in a single box. It embeds Primary and Secondary Power distribution system, plus battery charging and 14V DC/DC converter functionality. Electromechanical contactors have long been the product of choice for aerospace power systems designers. CorePower[®] aircraft power distribution systems from Astronics replace traditional mechanical breaker systems with intelligently controlled solid-state switches to provide next-gen reliability and safety. Certified and flying today on multiple platforms, the Astronics' CorePower system deploys. ISO 1540:2006 specifies the characteristics of electrical power supplied to the terminals of electrical utilization equipment installed in an aircraft. It is intended to support the interface definition for user equipment designed to accept electrical power on a variety of new civil aircraft. Through our long time know-how, we undertake the integration of complete electric racks & cabinets, for the Commercial and Military Aerospace markets. We manufacture main component assemblies for Cockpit & Avionics, Fuselage, Cabin and Galley.
