

Anchor bolt length of communication tower

Overview

The clear space below the leveling nut is not limited by the TIA-222 Standard; however, the ASCE Manual(1) suggests limiting the distance to two bolt diameters. The application discloses a reinforced anchor bolt structure for a communication iron tower, which relates to the technical field of anchor bolt fixation, and comprises an externally connected anchor bolt, an internally fixed anchor bolt, a mechanical anchoring mechanism and a chemical anchoring. ASMTower performs the required structural analysis and designs of telecom towers according to the requirements of the design code used. ASMTower is capable of performing the analysis and design of telecom towers according to the following standards. The vertical supports have lattice members connected to each other with diagonal bracing at lower. GCF manufactures an entire line of special fully engineered Communication Tower Products. The original tower was over 50 years old. When the 2-1/2" diameter anchor bolts were poured too low, the contractor needed a quick fix so the project would not be delayed.
