

Are galvanized cable trays the same as steel cable trays

Overview

At its core, a galvanized cable tray is a steel-based cable support system that has been coated with zinc to protect against rust and oxidation. This protective layer makes the tray far more resistant to corrosion than untreated steel and extends the system's lifespan in harsh. When it comes to selecting the ideal cable tray for supporting electrical cables in various industrial applications, the choice between SS Cable Tray (Stainless Steel Cable Tray) and Galv Cable Tray (Galvanized Cable Tray) is crucial. The process involves several steps, including surface preparation, zinc alloy formation, and cooling. This zinc coating provides moderate corrosion resistance, making galvanized steel cable trays ideal for installations in dry indoor or outdoor environments with. According to the National Electrical Code standard of the United States, a cable tray is a unit or assembly of units or sections and associated fittings forming a rigid structural system used to securely fasten or support cables and raceways.
