

Bob optical access module

Overview

It supports Ethernet GE or XG-PON upstream transmission and implements all-optical gigabit access for enterprises. The invention discloses a kind of light transmit-receive integrated component and BOB optical module with interference free performance comprising BOSA shell, ROSA structure and conductor ground structure. BOSA shell includes the rectangular housing of BOSA, TOSA structure and tail optical fiber. Disclosed are a bi-directional optical sub-assembly (BOSA) with an anti-interference performance, and a BOB optical module. The bi-directional optical sub-assembly comprises a BOSA shell, a ROSA structure (4), and a conductor grounding structure, wherein the BOSA shell comprises a BOSA square outer. r experiments in quantum communications. Essential of both, the transmitter and receiver is a diffraction limited obscuration free. SFP modules are small, hot-swappable devices used in both telecommunications and data communications. These modules connect a network device's motherboard to a fiber optic or copper networking cable. Obviously, BoB has a large market and can reduce costs.
