Overview

00/pc, Ready Stock, Same Day Shipping, Lifetime Warranty! CWDM-SFP-1470, \$110. Dual single channel OADM Module (1470nm). Designed for Coarse Wavelength Division Multiplexing, these CWDM SFP modules send and receive optical signals on specific wavelength channels, allowing multiple services to coexist on the same fiber with a balanced mix of capacity, simplicity, and cost. Cisco Coarse Wave Division Multiplexing (CWDM) Solution allows scalable and easy-to-deploy Gigabit Ethernet (GbE) and Fibre Channel services. The combination of CWDM GBICs and CWDM SFPs and CWDM Optical Add-Drop Modules (OADMs) and Multiplexers enables the design of a flexible and highly available. The Cisco CWDM-SFP-1470 Compatible 1000BASE-CWDM SFP transceiver supports up to 80km link lengths over single-mode fiber (SMF) via an LC duplex connector. Each SFP transceiver module is individually tested to be used on a series of Cisco switches, routers, servers, network interface card (NICs). Prior to the relatively recent ITU standardization of the term, one common definition for CWDM was two or more signals multiplexed onto a single fiber, with one signal in the 1550 nm band and the other in the 1310 nm band. CWDM works by combining multiple optical signals on a single fiber optic cable through the use of different.
