

# Can fiber optic patch cords only be connected to optical modules

## Overview

Fiber patch cord can also be used to connect optical modules. ZION Communication supplies both standard patch cords and custom assemblies to match your equipment, distance, and installation. When you build or upgrade a fiber network, the same four words pop up everywhere— fiber optic (bare fiber), pigtail, patch cord, optical cable. They're related, but they are not interchangeable. Mixing them up drives costs higher, increases loss, and slows your rollout. As data rates increase from 10G → 100G → 400G → 800G, patch cables must handle more bandwidth, more density, and stricter. Fiber optic patch cords, also known as fiber optic patch cables or fiber jumpers, are indispensable components in modern optical networks. They act as the critical link for interconnecting devices like optical switches, servers, and distribution frames. Fiber optic patch cables are found almost everywhere; cable television networks (CATV), data centers, computer networks, and telephone networks.
