

Dimensional parameters of intelligent cold aisle for base stations

Overview

Maximum Aisle Length: When equipment cabinets form a continuous row, the aisle length should not exceed 16 meters. This solution is capable of offering various aspects, including energy efficiency and cooling effectiveness, and improve overall operational performance. Below are some key takeaways, rationale, and requirements for implement the evolving needs & configurations of colocation containment is a crucial strategy in data center. Traditional open aisle data centres use perimeter PAC (precision air conditioning) or CRAC (computer room air conditioning) units to channel cold air up through a raised floor void via grilles positioned in front of the IT cabinets. An enormous amount of energy is used every day to maintain an acceptable intake. More frequently, data centers are using hot and/or cold aisle cooling containment solutions to help with managing airflow, eliminating hot spots and improving energy efficiency. Below are general guidelines.
