

Drill holes for cable outlets inside cable trays

Overview

The number of drill holes is dependent on the height and width of the cable trays. At Prime Cut Diamond Drilling, we support electricians, M&E contractors, and containment specialists by providing clean, accurate penetrations exactly where needed. But just as important as the hole itself is making sure it's done in line with fire safety regulations and cable containment. ngs, etc. Structural building members should never be cut, and cable trays should not be installed in hoist way or where subject to physical. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. B-Line series KwikRail cable tray systems feature rungs with patented fastener holes, allowing installers to easily remove, reposition or add rungs. These Guidance Notes are applicable to fixed and floating offshore structures as well as drilling units.
