

# Fiber Bragg Grating Spectrometer Experiment

## Overview

In this paper we show that spectra can be acquired for each pixel in a confocal spatial scan by using a fast spectrometer based on an array of strong, broadband visible fiber Bragg gratings. As an added benefit, the fiber entrance face can act as the pinhole in our. A fiber Bragg grating (FBG) is a type of distributed Bragg reflector constructed in a short segment of optical fiber that reflects particular wavelengths of light and transmits all others. 2 mm and constant grating period (uniform FBG) is proposed as an integrated dispersive element for spectral analysis in a single-mode glass fiber. The conventional interrogators can monitor many peak-wavelengths at a rate of a few. In this step, you will learn how to open the Grating Manager dialog box and how to access the Grating Definition dialog box in which you can define the parameters of each grating.
