

Four-core gigabit multimode fiber

Overview

With a core diameter of 50/125 μm , OM4 fiber cables support data transmission speeds of 10 Gbps over distances of up to 400 meters, making them an excellent choice for data centers and wide area networks. There are several kinds of multimode fiber types available for high-speed network installations, and each with a different reach and data-rate capability. Featuring 4 multimode fibers with 50/125 μm core size and a durable GYXTW-4A1a center bundle tube construction, this armored cable offers. This Applications Engineering Note (AE Note) discusses the criteria for properly selecting the optimal multimode fiber (MMF) for enterprise applications. This guide explains the five generations of multimode fiber - OM1, OM2. 4 Core Optical Fiber Cable Specification Optical Fiber Cable 4 Core Key Features ● LC to LC or SC to SC ● Single-mode /multimode for option ● OM3 for multimode ● Optical Fiber 4 Cores Inside ● Compatible with all standard fibre optic equipment and connectors ● Stainless Steel sheathed and metal.
