

# High-speed cables and active optical cables

## Overview

In modern high-speed networking and video transmission systems, AOC cable (Active Optical Cable) plays a crucial role. In this guide, we will explore what an AOC cable is, how active optical cables work, their benefits, drawbacks, use cases, selection criteria, and best. There are various connection solutions available for switching networks, such as optical modules + optical fibers, Active Optical Cables (AOC), and Direct Attach Cables (DAC). DAC can be further categorized into active ACC, AEC, and passive DAC. So, what exactly are these solutions and how do they. An Active Optical Cable (AOC) is a high-performance fiber optic interconnect used for short-range, high-speed, multi-lane communication in data centers and enterprise networking environments. An AOC works by converting electrical signals into optical signals using integrated optical transceivers.
