

How far away is a power distribution box in Cambodia for safety

Overview

The distribution boxes shall be located in areas where the safety equipment or load capacity is relatively concentrated. But the actual EMFs emitted from different sources can vary greatly, and the distances needed to reach a desired “safety level” are difficult to predict. Proper electrical. “Electric Power Facility” means all facilities for generation, transmission and supply of electric power such as power stations, substations, switching stations, electrical lines, dispatching centers etc. in this also including equipment, buildings, dams, waterways, fuel storage yards, ash. With the increasing number of power lines in urban areas, it has become crucial to understand the importance of maintaining a safe distance. DECIDES Article 1 To amend the. The primary function of a substation is to transform voltage, either stepping down the high voltage electricity from power plants for distribution to cities and towns, or stepping it up for long-distance transmission.
