

How to Set IP Addresses for a Telecom Fiber Optic Router

Overview

Configuration method: Log in to your router, go to Network Parameters - LAN Settings - IP Address: change it to your desired subnet; I set it as 192. 1 - Subnet Mask: I set this as 255. Make sure to update the firmware, configure Wi-Fi security, and customize your network name for optimal performance. In this tutorial, we'll guide you step-by-step through simple and effective configuration of your TP Link. Since the default address of the fiber modem is 192. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled). Most Internet Service Providers (ISPs) automatically assign an IP address to your router when it connects to the Internet. If you want to reserve an IP address for a device. Whether you need to modify your Wi-Fi password, update security settings, or optimize your network performance, this comprehensive guide will walk you through how to access router settings and make the necessary changes.
