

How to debug an H3 aggregation switch

Overview

To debug LACP errors information, use the debug lacp errors command. The following are the common causes for this type of issue:

- Incorrect configuration on the aggregate interface.
- Physical link fault on the member.

This article provides troubleshooting commands that can be used when facing LACP (Link Aggregation Control Protocol) issues on a FortiGate. Solution There are three modes of LACP on the FortiGate: Active: Actively use LACP. Ethernet link aggregation bundles multiple physical Ethernet links into one logical link, called an aggregate link. In an aggregate link, traffic is distributed across the member ports.

1 Setting method one: 1 and 2 ports for static port aggregation + Access link type Setting method: (1) Network > Interface > Link Aggregation, add the aggregation group BAGG1, select the static aggregation in the aggregation mode, and fill in the aggregation group.
