

How to use the MA5671A optical module

Overview

The MA5671A plugs into SFP slot of the BTS or other baseband units for backhaul of cellular or microwave sites. It is connected to the GPON Optical Line Terminal (OLT) through its PON interface. The downlink interface supports Gigabit Ethernet (GE) to the “host” terminal providing high bandwidth. SmartAX MA5671A: Access product manuals, HedEx documents, product images and visio stencils. Did you know that you can replace the fiber optic modem/router supplied by your internet service provider (ISP) with a simple SFP stick that runs Linux and does the mapping of light into Ethernet packets directly into your router?

Hack GPON is the ultimate resource with tutorials and guides for. In this video, we access the internet through a MikroTik router using the Huawei MA5671A GPON SFP, which we previously connected via O5. Additionally, we exceed the gigabit port limits!. 5Gbps using a BCM57810S NIC provides a detailed explanation of how to switch this network card's operating mode. 5G functionality via DOS eDiag: (The same applies for UEFI eDiag) Execute the following commands (please read and verify them).
