

Incoming cable of the power distribution box at the construction site

Overview

Rubber insulated cables shall be used for the incoming and outgoing lines, and the incoming and outgoing ports shall be set at the lower end face of the box body, with protective rings added. There are different types of power cables that can be used on construction sites. Some of the common types of cables used on construction sites are rubber cables, which are ideal for use on. Below procedure will help you to establish a safe standard for the installation of temporary and permanent electrical fixtures/appliances on project sites.
