

# Is the 10G optical module backward compatible

## Overview

Data Rate: Supports 10Gbps (some variants also support 1G/2.5G/5G for backward compatibility). Optimized small form-factor pluggable, SFP+, is intended for 10G networking uses. Realizing the 10 Gbit/s data throughput in a relatively compact form factor—which is the same as SFP—is the most. Common form factors are SFP (1 G), SFP+ (10 G), SFP28 (25 G), QSFP+ (40 G) and QSFP28 (100 G). The question we answer below is simple: “Which of these can I mix and match without killing the link?”

What “compatibility” really means?

All reputable transceivers follow the Multi-Source Agreement (MSA). Since SFP+ is exactly the same dimensions as SFP, it is backward compatible with SFP, but provides much higher data rates. The data rate configuration is not automatic generally, and you need to configure the port.
