

Is the cable tray hot-dip galvanized or cold-dip galvanized

Overview

The hot-dip galvanizing process involves several carefully controlled steps to ensure that cable trays receive the best possible protection against corrosion. From surface preparation to the final inspection, every stage is essential in achieving a uniform and durable zinc coating. Why Choose Hot-Dip. Cable trays, available in hot-dip galvanized, pre-galvanized, stainless steel (304-316), Corten-A, aluminum, and electrostatically powder-coated varieties, can be used in a wide range of environments, from building interiors to airports, ships, and refineries. Their purpose is to provide a safe pathway for. For example, a 36" wide, 24-foot section of ladder cable tray with a 6" side rail, NEMA 20C hot-dip galvanized steel cable tray weighs about 200 lbs, whereas the same cable tray in aluminum weighs only about 100 lbs. When installers must carry and put cable tray sections into place, which may be. Galvanized cable tray is also known as an electro-galvanized cable tray; most people understand it as galvanized cable tray and think it is a hot-dip galvanized cable tray.
