

# Lifespan of Fiber Optic Communication Equipment

## Overview

While routers, switches, and transceivers often have upgrade cycles of 3 to 5 years, properly installed and maintained fiber cabling systems can last 15 years or more — spanning multiple hardware generations. The longevity of fiber optic cabling infrastructure has already exceeded 35 years since the first deployments and we expect the average lifetime will be much longer than 35 years based on the materials, technologies, and manufacturing processes used to produce modern, high quality optical fiber and. The lifecycle of fiber optic products involves multiple stages, from initial design and manufacturing to deployment, maintenance, and eventual upgrades or replacement. Proper lifecycle management ensures reliability, cost-effectiveness, and minimal environmental impact (2). In this article, we'll. The lifespan of fiber optic cables and their components is important to note for planning future technological needs and investments. The core of a fiber optic network consists of. The industry standard says Fiber Optic Cable Lifespan should last 25 years.
