

Material Standards for Corrosion-Resistant Distribution Boxes

Overview

The ISO12944:2018 standard is intended to assist engineers and corrosion experts in adopting best practice in corrosion protection of structural steel with coatings at new construction and repairs. Maintaining the structural integrity of the steel enclosures essentially depends on the precise matching of the material's metallurgical. Let's explore the essential material requirements that ensure these boxes are safe, reliable, and long-lasting. Impact Resistance and Durability Distribution boxes are often installed in areas where they may be subject to accidental impacts or rough handling, so they must be impact-resistant. This makes the Distribution Box a perfect choice. Pepperl+Fuchs provides a specialized portfolio of Ex d (flameproof) and Ex tb (dust protection by enclosure) certified terminal boxes and junction boxes engineered for reliable use in explosion-hazardous areas.
