

New Equipment for Fiber Optic Fusion Splicing

Overview

Fusion splicers are essential for creating low-loss, high-performance fiber optic connections in telecom, FTTH, and data center applications. The best splicers offer core alignment, fast splice times, durable designs, and smart features like cloud syncing and automated calibration. Top-rated models. In Japan, we hold Fiber optic training where participants can systematically acquire knowledge and skills necessary for using fusion splicer, tools, and performing splicing work. These devices align fiber cores or claddings using electric arc technology, ensuring minimal light scattering or reflection, and are essential for. Beginning in 1984, Fujikura introduced Profile Alignment Splicing (PAS) technology which quickly emerged as the industry preferred alignment methodology. In 1988, Fujikura introduced the first ribbon splicer and then expanded its product offering by developing the first 24-fiber ribbon splicer.
