

OPGW Optical Cable and Fittings Processing

Overview

The requirement includes the design, supply, stringing and splicing of OPGW cable on 400KV, 220KV & 132KV Transmission Towers. Prysmian has a built-in multi-step quality assurance programme, which covers the entire production process from cable design and raw materials purchasing, to final inspection for any single project. Prysmian never has a pre-determined answer to a challenge – instead, number of overhead line applications for the transmission of information. Depending on design, OPGW (optical ground wire) is designed for the special requirements of fiber optic overhead cables. We have been developing fittings for fiber data transmission in such cables takes place via modulated. OPGW hardware fittings serve as the backbone for any fiber optic installation, providing necessary support while safeguarding delicate fiber cable from environmental hazards. These are the same whether they are in OPGW or in ADSS. Overwhelmingly most commonly used fiber type! As a pulse travels down a fiber, dispersion causes pulse spreading.
