

One switch connects to two fiber optic cables

Overview

Short answer: Usually yes, you use them in pairs, but the “pair” can be a media converter on one end and a fiber switch (or SFP in a switch) on the other, as long as both sides speak the same speed, wavelength, and optical mode. In this article, we'll explain how to connect multiple Ethernet switches using fiber optic cables and the equipment required for this to work. Network topology refers to the way in which the links and nodes of a network are arranged in relation to each other. I also bought 1 LC to LC 50/125, OFNP (jumper?

) cable to test with, i have yet to set everything up at home but before i start setting up and configuring, my question is do i have a proper base setup for one. Fiber media converters quietly solve a big, practical problem: they bridge copper Ethernet to fiber and extend links far beyond copper's reach. In real networks such as campuses, factories, metro POPs converters let you reuse existing switches and still run fiber for long distance, EMI immunity. SFP modules insert into these slots and require two strands of fiber, typically duplex Using multi mode fiber (for runs under 1000 feet) or duplex single mode fiber (for runs over 1000 feet). But is it possible to connect AB and BC cables using fiber optic patch cords ?

Will it work in this fashion ?

If this can work, I. I am planning to connect core switch to multiple switches using 6 strand fiber cable. which type of cnnnection is resilient Star or Ring?
