

Optical Module S Short Range

Overview

SR stands for Short Range, these transceivers support link length of 300m over multi-mode fiber and use 850nm lasers. Some are responsible for connections of a few meters between server racks, while others bear the heavy responsibility of spanning tens of kilometers across a city. This difference is the most fundamental dividing line in the field of optical communication. From the perspective of physical layer. In optical communication, SR and LR SFP modules are among the most widely used solutions, mainly distinguished by their transmission distance, wavelength, and the type of fiber they require. SR. Published: 2026 | Category: Network Hardware Knowledge Base / Optical Communications Core Keywords: SFP Module, SFP Transceiver, Small Form Factor Pluggable, What is SFP, SFP vs SFP+ Read Time: Approx. Short-distance optical modules, on the other hand, are commonly used in indoor environments—data centers, server rooms, HDNI optical. Today ETU-LINK will take you through the differences between long-distance optical modules and short-distance optical modules. SFP-10G-SR vs SFP-10G-LR vs SFP-10G-LRM vs SFP-10G-ER vs SFP-10G- ZR is the most common scene abbreviations in.
