## Overview

GitHub - kakapez/optical\_powermeter: A GUI python script to measure optical power meter via ADCserial protocol. (Image on the left was created with chatGPT. ) There are several optical power meters you can use in your experiments: they have different designs and can be attached to different sensors. py implements Kivy so the powermeter can used from an android tablet, though it does require the tablet to have root access so you can get access to the serial port. ') Hardware wrapper for Newport 1830C optical power meter. The current input range, [1-8], where 1 is lowest signal. To build DIY optical power meter with standard SFP module and Arduino - Can measure optical power in dbm and watt - Can Enable/Disable TX power output (laser source) - Can debug via UART And Arduino Library - a lib for SFP/DDM interfacing (not only optical sfp transceiver - to interface and. Regarding reading data from electricity smart-meters as I understand there's two ways to read data out-of-the box today with HA: But there's a 3rd way and I was wondering if somebody already considered working on it (before I do): On my smart meter I have an optical RX/TX port (see picture), and as.
