

Protection of the small busbar at the top of the screen cabinet

Overview

Therefore, busbar clamps can be simply understood as a metal clamp used to fix the busbar, which can effectively prevent the loose connection between the busbar and electrical components in the distribution cabinet, and ensure the stability and reliability of the power system. The connecting device for the small bus at the. Busbar Insulators are actually a type of insulator. They are mainly used to provide reliable insulation and mechanical support for the busbar in the distribution cabinet. Thus protection of busbars requires special consideration bearing in mind that the loss of a busbar following a busbar fault can result in subsequent loss of lines and transformers connected to the busbar. Busbars form an important link. TE Connectivity's (TE) Raychem BMOD cold applied busbar insulation connection covers are designed to protect and insulate energized busbar connections from flashover due to accidental contact up to 36 kV.
