

# QSFP28 optical module for railway communication SFP

## Overview

The QSFP28 SR4 transceiver is a high-performing module for SR optical links over OM4 MMF, and is ideal for short-range, multi-lane data communication, and interconnects applications. The QSFP28 LR4 module is designed for extended reach and supports links up to 10km of single mode. FS 100G QSFP28 module solutions provide various high-density, low-power 100 Gigabit Ethernet connectivity options for data centre, high-performance computing networks, enterprise core&distribution layers, and service provider applications. Both short range and long-range transceiver. A practical, engineer-friendly guide to choosing the right transceiver form factor by speed, port density, power, migration plan, and operational risk—built for 25G/100G networks in 2026. 25G SFP28 is the new access/server baseline; deploy it for port density and long-term value. The optical signals back into electrical signals. An SFP interface on networking hardware is a modular slot for a media-specific transceiver, such as for a fiber-optic cable or a copper. RAD's SFP-XFP- -QSFP28-SFP+ small form-factor pluggable transceivers are hot-swappable and MSA (multi-source agreement) compliant, input/output transceiver units converting optical and electrical media.
