

# Quantum Communication Plus Optical Fiber

## Overview

In a recent study, a team led by Prem Kumar at Northwestern University demonstrated that quantum and classical data can coexist on the same fiber optic infrastructure. This breakthrough paves the way for a more practical implementation of quantum communication technology. Scientific goal: Show Qubit and entanglement transmission over a deployed fibre network. 18 km fiber connection between KTH Albanova and Ericsson in Kista. Polarization of light is. Quantum teleportation is a fundamental operation in quantum networking, but has yet to be demonstrated in fibers populated with high-power conventional optical signals. To bring quantum communications closer to reality, scientists are exploring a groundbreaking approach: integrating quantum data transmission into existing classical. Fiber port clusters are compact opto-mechanical units that split the radiation from one or more polarization-maintaining (PM) fibers into multiple output polarization-maintaining fiber cables with high efficiency and a variable splitting ratio.
