

Restart the device connected to the optical port on the switch

Overview

If possible, remove and reinstall the optical modules to check whether the fault is rectified. In order to consult the SPF model connected to an interface, run the `show idprom interface <interface-id>` command. Product Identifier (PID) = SFP-10G-LR-S
Tip: The minimum Cisco IOS® XE version required for an SFP to work is listed in the compatibility matrix. If not, run the `display version` command to check the software. Resetting your ONT box is a relatively straightforward process that can be done using one of the following methods: A power cycle, also known as a reboot, is the simplest way to reset your ONT box. To do this: Unplug the power cord: Locate the power cord connected to your ONT box and unplug it from. When optical modules operate on a switch, it is usually necessary to read the module's internal information to understand its working status—such as connection status and real-time metrics like optical power and temperature. Specifically, enter the interface configuration mode and input 'shutdown' and 'no shutdown'. Scope FortiSwitch and FortiGate. Download the file 'Compatible Transceivers' from the link below, or.
