

# Road Repair Fiber Optic Cable

## Overview

This article outlines five specific steps for repair: 1) Identify the break; 2) Cut out the damaged section; 3) Strip the cable; 4) Trim the fiber ends; 5) Test the repair. DIY fiber optic cable repair kits are increasingly popular for those who prefer home repairs. These cables consist of a core (glass or plastic) that carries light signals, surrounded by cladding to reflect light inward, a buffer for protection, and an outer jacket for durability. Once these tools are ready, you can start the repair step by step. Locates fiber breaks and measures signal loss before and after. ChipFill™ offers an ideal, on-the-spot repair of the road after the installation of optical cables which are used to provide internet access. Aerial installation is generally much less costly than underground construction also. Fiber in a duct solutions have a major aesthetic.
