

# ST type connection port

## Overview

5mm ceramic ferrule with a spring-loaded mechanism, secured by a bayonet mount. This design allows for easy connection and disconnection, suitable for both long and short-distance applications like campus networks, corporate environments, and military. The ST Connector features a 2. They are small, often overlooked components, yet they are essential for ensuring high-speed, low-loss, and reliable optical transmission. As data centers, telecom networks, and enterprise infrastructures migrate to fiber. Fiber connector types LC, SC, FC, ST, MTP, and MPO are widely used in past and present. What is a Fiber Connector?

The optical fiber connector is a kind of detachable passive optical component used. Fiber optic connectors play a crucial role in the world of telecommunications and data networking, acting as the critical interface between fiber optic cables and the devices or networks they connect. This connector connects optical fibers in such a way that they align accurately for good signal quality during transmission. It is also called Straight Tip because of its shape.
