

The AP has a built-in optical module

Overview

An optical module implements optical-to-electrical or electrical-to-optical conversion, and connects to an optical fiber cable for transmitting signals. It can also switch to the common mode, provide Layer 2 switching, realize on-demand access of the ordinary wall plate. The AP is powered with five built-in radios: three 2.4GHz/5GHz/6GHz radios serving high-density Wi-Fi clients, one full band radio dedicated to scanning for improved network security and Wi-Fi quality, and an integrated Bluetooth/Zigbee radio enabling the growing needs of enterprise IoT. Cisco offers a comprehensive range of pluggable optical modules for the Cisco ONS family of multiservice platforms. The wide variety of modules gives you flexible and cost-effective options for all types of interfaces. Cisco offers a range of GBIC, SFP, XFP, SFP+, CXP, CFP, Cisco CPAK, and QSFP+. An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications. 11ax) standard and is ideal for scenarios with densely-located rooms, such as hotel rooms, dormitories, and hospital wards. A wall plate access point (AP) can work as a Fat, Fit, or cloud AP.

An AP router WiFi module overrides the built-in WiFi of a computer. Here are the differences between a router, access point, and modem.

H3C WA7539 Wi-Fi 7 Triple-Radio Access Point-H3C

WA7539 features triple-radio 12 streams and built-in antennas, including 4x4 6-GHz, 4x4 5-GHz, and 4x4 2.4-GHz, delivering up to 18.67Gbps maximum data rate. The access point has a 10G optical
