

The classification standard for secondary distribution boxes is

Overview

Apply classification markings as prescribed in DoDM 5200. The main trunk is routed around the feeder service territory and may be connected to other feeders through normally-open tie points. Underground main trunks are possible-even common in urban areas, but cost much more than overhead construction. Lateral taps off of the main trunk are used to cover. The installation of secondary explosion-proof distribution boxes must comply with the following national and industry standards: 1. GB502572014 "Code for Construction and Acceptance of Electrical Installations in Explosion and Fire Hazardous Environments" This is the core standard for electrical. This section covers the requirements for electric equipment and wiring in locations that are classified depending on the properties of the flammable vapors, liquids or gases, or combustible dusts or fibers that may be present therein and the likelihood that a flammable or combustible concentration. The secondary box adopts the design of inner and outer doors, the appearance is plastic sprayed, safe and beautiful, and the rainproof box top is suitable for field work.
