

Two network cables are connected to the switch

Overview

A switch or hub is another device that can be used to connect multiple Ethernet cables together. The type of cable required depends on the type of switches you are using. For example, if you are using PoE (Power over Ethernet) switches, you will need a PoE cable. In contrast, a router connects your local area network (LAN) to the internet's. How to connect two switches together?

Are you looking to expand your network infrastructure and connect multiple switches together?

Connecting switches can be achieved through two common methods: cascading and stacking. One of them has my modem and a wifi access point (which can act as a switch). For redundancy, I'm. I want to be able to connect both Ethernet cables to the 1 computer and be able to manually switch between the 2 or (if it is possible) also have the computer drop the slower or down connection and reconnect with the other.
