

What interface should be selected for the core office switch

Overview

The RJ45 port is the standard copper Ethernet interface used in LANs, data centers, and uplink applications. SFP (Small Form-factor Pluggable) ports support 1-2.5 Gbps data rates and are hot-swappable. Ethernet switch ports are fundamental components in modern networking, each serving specific roles depending on network design and performance requirements. Enterprise LANs use the RJ45 port on 100/1000BASE switches. Speed and Duplex Settings Directly Impact Performance: Misaligned interface configurations. Outbound interface of education network traffic from the core switch. Configure a route to BRAS-b for users on the. Remote Management: Enable management features like SNMP, SSH, and web interfaces. And this process is a little more advanced than, say, setting up your home Internet or even a plug-and-play type switch. But, with the right guidance.
