

# What is the thickness of fire-resistant cable trays in Egypt

## Overview

The gap area between firestop packs and cables should not exceed 1 cm<sup>2</sup>, and the packing thickness should be not less than 24 cm. Select the tray width and thickness according to the number and weight of cables. Ensure mechanical strength is sufficient to prevent deformation or failure under full load. Cover plates should be square, of consistent suitable. Cablofil cable tray is the preferred choice for the cable containment of low and high voltage electric cables where fire resistance is crucial - this includes cable basket tray systems for Prysmian FP (FP400 and FP600) and Draka Firetuf type cables. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to si osure, overheating or. The thickness of the fireproof coating is required to be more than 1mm, and the fire resistance must be more than 30 minutes. This is the standard for the effect of general fireproof cable fireproof coatings, which also has a price relationship, which is cheap and expensive and has a good effect.
