

# Why does the router show the fiber optic light

## Overview

This light shows whether your ONT is getting power. What to check: Make sure the power cable is securely plugged into both the ONT and a working wall outlet. The tables in this article provide detailed information about the possible appearances of the LED lights on each device, the possible causes of each state, and what you should do. Typically, these lights correspond to various router functions such as power. The LEDs on your modem, optical network terminal (ONT), router, or modem/router combo (gateway) are most likely blinking because they're communicating what the device is doing, or there's an error. All networking devices, like modems and routers, provide a row of status lights that represent the. A solid red light indicates no internet connection or failed connection to your service provider's network, possibly from service outages, fibre signal issues, or route issues. POWER Normal: Solid/stagnant light. If OFF: The router is not powered — check the socket, adapter, or power cable.
